Communications Project Management

NYSTEC's team of project managers has been involved in some of the largest and most important telecommunications projects in the U.S., including the statewide system in New York, a wireless data network for New York City (one of the world's most sophisticated wireless projects), and the master plan for one of the world's largest urban building complexes. The NYSTEC Team can provide you with project leadership to help bring your telecommunications project to a successful outcome.

NYSTEC's project-management philosophy is based on the Project Management Institute's best practices as contained in the "Project Management Body of Knowledge" (PMBOK). We invest in ongoing training to keep our staff current with the latest thinking, and most of our project managers are certified Project Management Professionals. Whether leading a small technical team in a study or integrating the work of multiple consultants on a large engagement, NYSTEC's investment in developing project-management expertise will result in the following outcomes for your project:

- ▶ Greater Schedule Adherence,
- ▶ Lower Risk,
- ▶ Higher Quality,
- ▶ Cost Containment, and
- ▶ Greater Client Satisfaction.

NYSTEC believes in the "forward deployment" of the Project Manager and certain key technicians. But we also rely on remote resources to provide the depth and breadth to address any situation. We have equipped our project managers with all of the latest communication and collaboration tools to help them manage a project while being remote from some of the subject-matter experts. In this manner we keep our travel expenses low but maximize quality. We have numerous successes in executing projects through this approach.

At NYSTEC, we empower our project managers to be client advocates. They have the authority and expertise to make decisions that affect your project. You will find that the relationship that develops will help foster an environment of teamwork and collaboration not often found in today's fast-paced environment.

With a methodology firmly rooted in PMBOK and equipped with a modern array of communications tools and techniques, NYSTEC's project managers stand at the ready to assist you with your communication technology project. For more information on how we can assist you in your endeavors, please contact us at 888-9NYSTEC.
